Introduction

Purpose
The purpose of this document is to describe the requirement specification for the web site “Yada Yada Films”.

The intended audience for this document is two fold. First it is the contract between you and the client and the developer of the site. Two primary goals are:

1. Client gets a very good understanding of what you will be delivering.
2. Developer has a very good understanding of what they are going to create.

The web site is supposed to be a place for new viewers to learn about Yada Yada Films, and for fans to read up on the latest news, and watch the latest videos, all the while learning about their favorite actors.

Definitions, acronyms, and abbreviations
HTML – Hypertext markup language – used to define your content.
PHP – Personal Home Page – language that helps to customize html.
CSS – Cascading Style Sheets – used to define the look of a web site.
W3 Validation – refers to both Html and CSS validation tool provided by the W3c.org. the html validator is located at:
http://validator.w3.org/
with the CSS validator located at:
http://jigsaw.w3.org/css-validator/

Overall Description
Final Project for CS008. A website for my film group, Yada Yada Films. Contains all the latest news pertaining Yada Films, as well as all of our videos, info on the actors, awards we've won, info about us, and a form on how to contact us. Should be an enjoyable experience for a fan of Yada Yada films or a new comer.
Story Board
Assignment requirements

1. **Location** – all files will be located in the www-root/cs008 folder of your uvm Silk account. The assignment web page and the submit process will detail the exact location. Failure to have your site located in the correct folder by the due dates will result in a zero on the assignment. Be sure to pay attention to the lowercase letters.

2. **Html Validation** – All pages will pass W3C Html validation for html 5.

3. **Meta Information** – All pages will contain a proper title tag, Meta tags (author, character set and description).

4. CSS Validation – All pages will pass W3C 3.0 CSS validation.

5. CSS – all pages will have a linked style sheet. I am not going to require a specific set of rules but you will be graded on your effort of what you try (just having my sample gets you a zero).

6. **Head Section** – put the doctype and head section information in a file named top.php so you can include it all the pages.

7. **Navigation** – All pages will contain navigation to all other pages on the site using an ordered list (6 pages minimum). File name should be nav.php

8. **Content** – You will need to list three things that have climate change has had an impact on your life and what steps we can do to help improve the situation (one page for each item). Each page will have a minimum of 100 words not counting titles, lists or links. Be sure to use the correct elements to hold your content.

9. **Header** – All pages will contain a header with the logo about your site. File name should be header.php

10. **Form** - We want to entice people to fill out our form so the home page content should do just that. The form will follow my sample on github.

11. **Form** – Will contain fieldset's, legends, input type text for email address and a Submit button. Code will include documentation as shows on github.

12. **Form** – will have your email address as the default value as set by php.

13. **Form** – will process the forms submission:
   a. Perform security check making sure the page comes from itself.
   b. Flag for each error and style the object with the error on it.
   c. If form is incorrect redisplay form with descriptive error messages displayed before the form.
   d. Sanitize all data.
   e. Check email for being entered
   f. Check email for correct format
   g. On successful submission display message (don’t display form again).

14. **Form** - should email the person who filled it out.

15. **Content** – Will display the email message.
16. **Form** – add the following inputs to your form (minimum, you can add more):
   a. Two text boxes (so with email address you will have three).
   b. One list box.
   c. Three check boxes.
   d. Three radio buttons (one group).
   e. Field sets and legends as needed.
   f. Data should be validated for not missing, valid format etc. as needed.

17. **Form** – all data should be saved to a csv file.

18. **Form** – should be styled with CSS different than my default.

19. **Footer** – All pages will contain a footer with the content determined by you. Filename will be footer.php

20. **CSV File** – take your array and put your array into a csv file. Add the code to Open, Read, Close and Display this data in a table element.

21. **Images** – Each page will have a minimum of one image.

22. **Types of images** – Create each of these images on your site. Each image will be in the figure element with the figcaption element identifying the type of image as listed below (easier for the grader)
   a. *Animated image*
   b. *Transparent image*
   c. *Image map with a minimum of three links (these can be external)*

23. **Browser compatibility** - This site will be checked on Firefox, Safari, Chrome and Internet Explorer.

24. **Footer** – All pages will contain a footer with your name. Be sure to use the correct element to contain the footer.

25. **File Names** – the main home page will be called index.php with the rest of the file names up to you (be sure to use .php).

26. **Specification Document (this file)**: must be updated and saved as a specs.pdf (must use pdf format and correct filename in the same folder to be graded).

### Specific requirements

1. **Title for main page**: Yada Yada Films
2. **Meta Description**: Yada Yada Films Website
3. **Meta Character set**: UTF - 8
4. **Logo**: No logo because I’m edgy
5. **Main page photo**: Photo of me and my girlfriend
6. **6 Pages, encompassing Yada Yada Films. Home About Filmography, Awards, Crew, and Contact**
7. Images on the site where they prove neccesarry. Includes Transparent
8. php on links to make them active or not
9. php to read data from a csv file and print it as a table
10. links for additional content
11. Separate php files for top, header, nav, and footer, then including those in each webpage.
12. Fix any bugs
13. Should include a form with fieldsets, legends, and an email with submit button
14. CSS Styling for the Form that fits the feel of the webpage
15. Header and Nav located in top.php
16. Contact Page with form that connects to the rest of the site, and CSS that show site fits in
17. Sanitize all form data
18. Have a security system setup for the form
19. Validate all data being entered into the form
20. When the form is submitted have it display a different message
21. Email message to the submitted email
22. Change the email address that is sending the message
23. Display the message being sent
24. Save the data entered to a csv file.
25. Include many more fieldsets including comments, name, age, favorite flower, interests etc
26. All these fieldsets styled with CSS to fit the website
27. Background image of clouds that stays static
28. Up to date content on the film group.
